

Group 2- MINUTES 02-12-2016

Date	02-12-2016
Time	12:27
Location	Room A0-26
Present	Koos van Tubergen Adu Stephen, Andreicha Semida, Buaron Tal, Cholodov Andrej and Nieuwenhuis Jens

- 12:27 Meeting started in A0-26, the meeting began three minutes late due to the fact that some of the members came back late from the small break we had, after everyone arrived, the meeting started with the discussion over the last meeting minutes, Koos said that the minutes improved from last meeting, and told us we should test the minutes on someone who wasn't in the meeting in order to ensure the quality of the minutes.
- 12:35 After finishing going over the last meeting minutes, we then looked in the agenda and the next topic to discuss is the mathematical models for our project, on the first look Koos have noticed that we haven't referenced the book we took the formulas from. After looking at the first formula which consist the variable (N = population), we figured that this implies only to the population of the Herbivores and not the geese.
- 12:42 The formula we have discussed on so far turn out to be too vague and doesn't answers any of our sub-questions, therefore, we moved on to the next formula which checks recourse depletion and limited space to predict population growth. It was then decided that we need to define time frame for our variables, otherwise it wouldn't be clear what are we checking.
- 12:52 The discussion over the same formula was still going, there was something which wasn't clear in the formula which relate to two different parameters, but Koos helped us and told us we can decide on those parameters values. Besides, those two formulas we discussed, there is one more formula which we haven't discussed about yet due to the fact we haven't going over the materials of this formula.
- 13:07 Meeting adjourned.
